

1. The layout is not adjusted properly. View Edit button and back button.

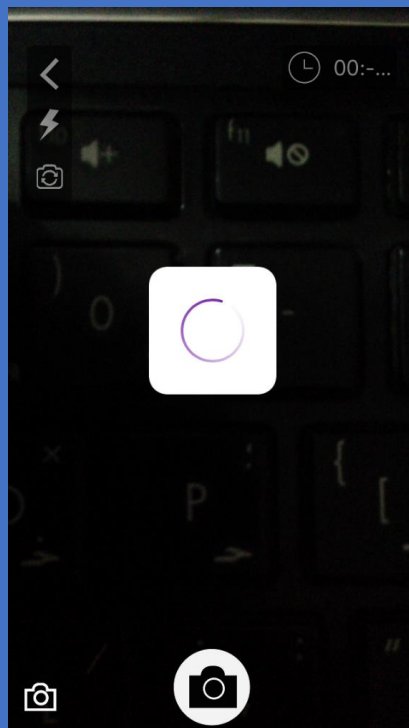

2. When I clicked the profile icon on bottom right, it navigates to a new screen. Good. I can view my name and I can judge and then it's my profile. But what is the counter showing. If it's number of views then write it. You need to add some text to represent what actually is it?

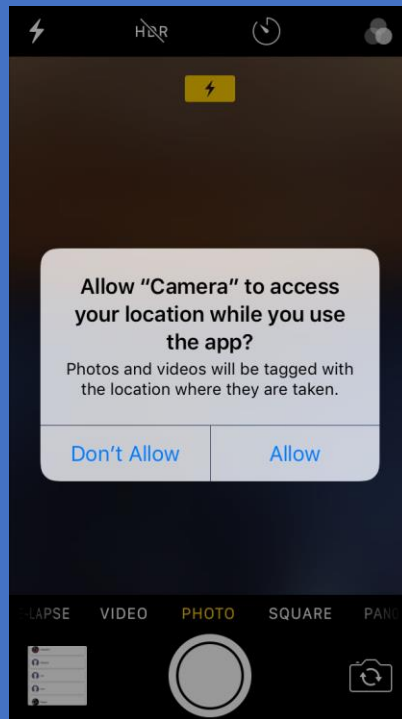

3. When I click on edit profile it is not showing my current password. And if I want to change the password. There is no way to change it. Please add it.
4. Updated the name in edit profile. It gave an error that profile updated successfully. But then pressed back button and the app crashed. Now the application keeps crashing whenever it is launched. So, I reinstalled it again. Even removed from cache but did not worked.
5. I created a new account and no email verification was asked (High Security issue)
6. When we move towards Find Friends. Click search for user and followed a user successfully. All Good. But after that I have to click back button 4 times to go back to home screen. User's don't like to click 4 times. Please add some navigation bar or improve "One click away functionality".
7. After that navigated to Find Friends again. Clicked I am Following. But it showed me "No record found". Why is it showing? I have already followed a user. It must show me that user which I followed.

8. Now, Login with the first user to whom follow request was sent. Went to notification, clicked that person but application crashed. So the first cannot still accept the follow request. And the notification keeps highlighted with red borders.
9. While making video there is no response / prompt that either the video is being made or not. Because the timer is decrement (continuously)
10. Rendering the video is taking A LOT of time and yet not completed. (Can you apply a better algorithm which is more efficient? ) I have to close the application by force to use the app again.

11. As the Follow functionality is not working. Create an Episode with Friends cannot be tested.
12. I login as 'Chaudhry' and I am also viewing Chaudhry in "Search Friends" screen. It means that you need to add proper validation that only one user can be registered with unique name. It must give prompt that username has been taken.
13. Just closed the application and opened my device camera. It shows me following screen. It means that application is still using the device camera resource. Update it.

*Please Use Professional UI design concept. Follow Proper HCI rules to enhance professionalism in the project. (Collaborate with Mr. Qais on this aspect as well)*
