
Indxx India Small Cap Index

Index Description

The Indxx India Small Cap Index is a maximum 75 stock free-float adjusted market capitalization weighted index designed to measure the market performance of companies in the small cap segment in India.

Creation of Master List

Universe

In order to be considered for inclusion in the universe,

- The security must have its primary listing in India.
- The security must have a free-float adjusted market capitalization between \$100 million and \$2 billion.
- The security must have a 6-month average daily turnover greater than or equal to \$2 million.
- The security must have traded on 90% of the eligible trading days in the last 6 months. In case a security does not have a trading history of 6 months (only IPOs), such a security must have started trading at least 3 months before the start of the Reconstitution/Rebalancing Process, and should have traded on 90% of the eligible trading days for the past 3 months.

Foreign Institutional Investor (FII) Limit

- Available FII Limit of the security must be at least 5%. Securities which are a part of the Government of India restrictive list for foreign investors would not be considered for inclusion in the universe.

Free Float

- All securities must have a minimum free float equivalent to 10% of total shares outstanding.

Maximum Price

Securities trading at a price of \$10,000 or above are ineligible for inclusion in the universe. This rule is not applicable for existing constituents. Existing constituents would remain in the universe irrespective of their stock price.

Security Type

Common Stock

Share Classes

If multiple share classes exist for a company, the most liquid share class is considered for inclusion in the portfolio.

Security Selection

From the universe, all companies which are engaged in Plantation or Defense related activities are excluded. The remaining companies form the selection list.

Final Composition

The Selection List is arranged in descending order by market capitalization and a maximum of 75 lowest ranking securities (companies with the lowest market capitalization) are selected for inclusion in the index.

Weighting

The index is free-float market cap weighted, using security-level free float market capitalization data, at the time reconstitution. The index has a single-security weight cap of 4.90%. If the weight of a constituent(s) exceeds 4.90%, the excess weight is proportionately allocated to the remaining constituents.

Buffer Rules

Buffer Rules are employed to reduce Portfolio Turnover. If an existing index constituent fulfils all the other criteria for universe creation, except market capitalization or liquidity, the following buffer rules apply:

Market Capitalization

The constituent shall continue to be included in the universe, if its market capitalization is greater than or equal to 80% of the previously defined market capitalization limit.

Liquidity

The constituent shall continue to be included in the universe if its 6-month ADTV is greater than or equal to 70% of the previously defined liquidity limit.

Reconstitution and Rebalancing Rules

- The index follows annual reconstitution and rebalancing. The new portfolio becomes effective at the close of business on the second-last Friday of March each year. This day is called the 'Effective Day'.
- If there are seven or fewer trading days after the rebalance date up to and including the last trading day of the quarter, the new portfolio becomes effective at the close of business on the third-last Friday of March each year.
- The security selection and portfolio creation process starts on Friday exactly a month before the 'Effective Day', called the 'Selection Day'. The final portfolio constituents are shortlisted from the Selection List, created using data as of the Selection Day.
- Weights are calculated five trading days prior to the Effective Day. Index Shares are frozen using weights as of this day.

Quarterly Review

- At the end of every calendar quarter, each index constituent is reviewed for any corporate news or event which has significantly impacted the liquidity or raised concerns on corporate governance.
- The constituents will also be checked for breach of any trading limits.
- If there is any red flag based on the above checks, the index committee shall decide on continued index membership of the constituent.
- Any changes to the index composition resulting from the review process will be communicated to the index users subsequently.
- As a result of the review, effected companies would be removed at the close of the last working day of each quarter (March, June, Sep, December) and their weights would be allocated among remaining index constituents in the proportion of their existing weights.

Corporate Actions

Indxx standard Corporate Actions for market cap weighted indices apply. The corporate action guidebook is present in the Announcements section of our website, under 'Index Documents'
